

Integrate all your monitoring solutions in a single Operation Environment...

At present, most of the operators have to work with the different monitoring screens of the various monitoring systems in the market.

This situation is **not efficient**, it makes difficult to manage daily operation of the various stations, roofs and monitored equipment. Cloud Thinking Solar Management (CTSM) integrates ALL monitoring activities / scada systems into a single management environment, eliminating management inefficiencies and increasing operator productivity.

Benefits:

- **No need for hardware investment** as the monitoring software is used.
- The operator carries out **all operations in a SINGLE environment** avoiding the use of several monitoring screens.
- **Optimization of the operator productivity** without added value.
